

NeoLink keeps your screw machine turning

NeoLink — a new twist to a much used product just for operators of Bechler, Petermann, Star and Tornos Swiss screw machines.

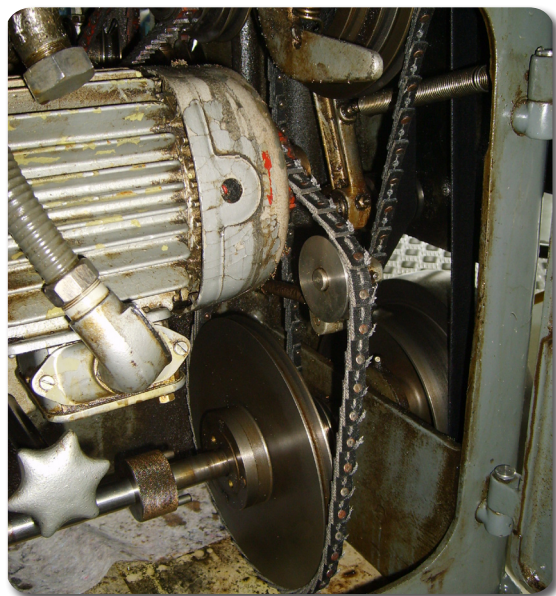

NeoLink is the latest addition to the extensive range of high performance composite, detachable (link) V-belts from Fenner Drives.

Incorporating our traditional chloroprene (Neoprene) reinforced material, NeoLink embraces the well proven operational benefits of our Veelos link belt product with the added value advantage of a T-profile connecting stud for easy belt assembly and adjustment.

Today the conventional, installed base of Swiss screw machines around the world remains extensive. Over the last 30 years, link construction V-belts have been shown to be the ideal design for efficient machine operation and consistent finished part quality.

Upgrade to NeoLink today for improved finished part quality and machine productivity.

Take advantage of NeoLink's performance benefits:

- Significant improvement in part surface finish and roundness as a direct result of reduced tool head chatter
- Greatly enhanced resistance to cutting oils and elevated "drive in-cabinet" temperatures
- Very easy installation on fixed center drives
- No need to dismantle stepped drive set-ups for belt installation
- Belt lengths can be optimally tuned for desired torque transmitted to tool head drive mechanism
- Available in Z/10 and A/13 cross sections — 10 metre packs
